

Lofted Barns

The Lofted Barn is the latest style we have in our line of products. It can be built with metal or wood siding and either a metal or shingle roof, whichever your preference. This building comes standard with a 4 foot loft, a single 48" door on 8 wide buildings, and double 72" doors on 10 and 12 wide buildings. Handi House added this new style building to provide you with extra height beyond our standard storage building.

Cedar Sheds

This unit is the most prestigious of all our models. Handi House uses only number one 1"x8" cedar boards to construct the building. It is standard with a wood door, metal roof, and a certain number of windows and electrical outlets depending on the size of the unit that you prefer. As with all of our buildings, a shingle roof is available if requested.
