	Silver Metal Finish	Brown
	Dove Gray	TT Red
	Mediterranean Blue	TT Brown
	Jabo Green	TT Gray

Manufacturing Standards

At our manufacturing facility in Swainsboro, Georgia we are centrally located to distribute buildings throughout the Southeast. We have three separate plants on this site in which each produces a different type of building that enables us to offer the variety to best meet your needs.

All units are either wood structure with #1 southern yellow pine that enable us to meet the higher wind zones or our steel stud structure of either 18 or 20 gauge steel that both meet the 150 mph wind zones required in certain coastal regions of Florida.

With both the wood and steel framing of our buildings, we are able to adjust or add additional bracing that is needed for the engineering requirements of the different wind zones throughout Florida and other southern states. We also construct our buildings with a variety of trim packages that enhance the appearance and aesthetic of each unit.
